Read the following passage, then answer the questions:

Brain drain, which is the action of highly skilled and educated people leaving their country to work abroad, has become a concern in developing countries. Brain drain is also referred to as human capital flight. More and more third-world science and technology-educated people are heading for more prosperous countries, seeking higher wages and better working conditions. This has, of course, serious consequences for the sending countries.

While many people believe that immigration is a personal choice that must be understood and respected, others look at the phenomenon from a different perspective. What makes those educated people leave their countries should be seriously considered, and a distinction between push and pull factors must be made. The push factors include low wages and a lack of satisfactory working and living conditions. Social unrest, political conflicts and wars may also be determining causes. The pull factors, however, include intellectual freedom and **substantial** funds for research.

Brain drain has a negative impact on the sending countries economic prospects and competitiveness. It reduces the number of dynamic and creative people who can contribute to the development of their country.

Likewise, with more entrepreneurs taking their investments abroad, developing countries are missing an opportunity for wealth creation.

This has also had negative consequences for tax revenue and employment.

Most of the measures taken so far have not had any success in alleviating the effects of brain drain. A more global view must take into consideration the provision of adequate working and living conditions in the sending countries.

Another option should involve encouraging the expatriates to contribute their skills to the development of their countries without necessarily physically relocating.

Read the following passage, then answer the questions:

Residents of a small English-speaking community have gathered together to buy the post office and shop, ten years after buying the mall.

The people of this small town called "Berkingham" were determined to prevent their village from losing its main point. Ten years ago, they paid £ 40,000 for the mall, called Victoria, and now they have helped to keep the shop open. Most of the cost, £ 19,500, was met by the local council and a European Union grant, but the villagers needed to raise a further £ 6,000 to buy the shop from the owner, who is retiring. John Jones, chairman of the community committee, said: "We went around every house and came back with £ 500 more than we needed. The post office and the mall are essential to the life of the village. There are no other amenities." We were not prepared to stand by and let the heart and soul be taken out of our community. No one else was going to help us, so we decided to buy them ourselves." Berkingham had a population of 600, but that halved when nearby stone mines were closed. The primary school was closed because of the population decline, but the locals turned it into a leisure centre and youth club. The shop has been leased to a young businesswoman, "Olivia Newton", 24, who lives in the village with her husband, Dillon. She said, "There is a wonderful community spirit here."

Read the following passage, then answer the questions:

Adel is an athlete, and he wakes up at 4:30 am every weekday morning. He spends the first 30 minutes reading and then 15 minutes meditating.

At 5:15 a.m., Adel checks his email for only 30 minutes and then goes for his first run of the day. He runs for an hour and a half along the lake near his house. After running, Adel has a shower and then prepares breakfast, which is usually cereal and fruit. However, he occasionally has a less healthy breakfast. He usually finishes breakfast at around 8 a.m. If it is a weekday, he always leaves the house at 8:20 and goes to training. His training starts at 9 a.m., and he needs 30 minutes to drive to the gym. He trains for 3 hours with his team and then goes home for lunch. He always eats a very big and healthy lunch. As soon as he finishes lunch, he takes a **nap** for an hour. After his nap, he likes to go for a walk around the lake and look at nature. He sometimes reads or meditates at the lake in the afternoon. In the evening, during the week, he meets up with friends. Most of his friends are athletes too, so they have a lot to talk about. He typically goes to bed at 9 p.m. because he prefers to be awake in the morning than at night. He sometimes falls asleep listening to music, but he never watches television or reads anything on his tablet. He always makes sure his alarm is set and is almost always asleep by 9:45 p.m.

Read the following passage, then answer the questions:

The basic function of education is to teach children the knowledge, values and patterns of behavior they will need in the adult world as they move from one generation to another. Education is largely informal and occurs within the family. Family members teach children the values of their society as well as certain basic skills. Parents may teach their children the skills of cooking, food gathering, hunting and fishing. In this way, children learn the way of society by participating in adult activities. Formal education that involves instruction by specially trained teachers who follow officially recognised policies is called schooling. Schools **fulfil** this function through a set of courses that include such subjects as languages and literature, history, geography, mathematics, science and foreign languages. Also, schools develop students' critical thinking skills that are necessary to meet their needs in the future. Education refers to a process that continues all throughout life and is promoted by almost every experience in life. In this sense, educational materials are to be found in all walks of life. This concept of education emphasises chiefly the process by which personality is developed and by which we realise the relationships of man to man and man to the universe. To sum up, education is an aspect of socialisation that involves gaining knowledge and learning skills. It shapes our beliefs and moral values through a systematic, formal transmission.

Education is said to be an essential function of society, as it provides a contributing characteristic that helps to maintain and adapt society and its values.

Read the following passage, then answer the questions:

Communication through gestures and facial expressions can be defined as the transfer of messages without the use of words. It uses **physical** movement, such as hand gestures and body language, and also facial expressions, for example, eye contact, frowning and smiling. Gestures are a common part of communication that we all use to communicate every day, and most of us do not even think twice about using them.

Hand signals and gestures were used long before men learned to speak in words. Words are not men's only means of communicating with each other. Red Indians, for example, once spoke different languages but had a common sign language. The sight of smoke and the sound of drums are means of sending different messages. These are common sign languages without words. Today, people who are deaf or mute make even greater use of sign language. Though they may never be able to speak or hear, they can understand each other through gestures or hand signals. Signs are as good as words. In African jungles, drum messages warn people against dangers. In the Canary Islands, a whistling language passes messages among sailing boats. In cities, of course, traffic lights—red, yellow and green—control vehicles and people. They give them different instructions without words. Shaking hands and bowing show that we are friendly to each other. Gestures that mean "yes or no" are most interesting. In some countries, people say no by shaking their heads from side to side.

This happens in Egypt, but in Lebanon, people lift their heads up and back so that their chins move forwards.

1 Read the following passages, then answer the questions:**Passage No. 1**

A robot is a special kind of machine. It is a machine that moves. It follows instructions. The instructions come from a computer. It does not make mistakes. It doesn't get tired or complain unless you tell it to!

Robots are all around us. Some robots can help make cars. Other robots can help explore volcanoes. Certain robots can help vacuum your house. Some robots can even recognize words. They can be used to help answer telephone calls. Some robots look like humans. But most robots do not. Most robots just look like machines.

Long ago, people imagined robots. Over 2,000 years ago, a famous poet imagined robots. The poet's name was Homer. His robots were made of gold. They cleaned and made things. But they were not real. They were imaginary. Nobody was able to make a real robot. The first real robot was made in 1961. It was called Unimate. It was used to help make cars. It looked like a giant arm.

In the future, we will have even more robots. They will do things that we can't do. Or they will do things that we don't want to do. Or they will do things that are too dangerous for us. Robots will help us fight fires. They will help us fight wars. They will help us fight sickness. They will help us discover things. They will help make life better.

Passage No. 2

Tigers are one of the most powerful and graceful animals in the world. The different species that still exist today, namely the Bengal, Indochina, Siberian, South China, and Sumatra tigers, are in danger of becoming extinct. Due to irresponsible hunting, the Bali, Caspian, and Java tigers have already become extinct. This could soon happen to the other species too.

Tigers do not shy away from water and enjoy bathing in streams and lakes to escape the heat in hot climates. In the past, tigers were considered pests. With a smaller area to hunt, as man had taken up more of the land to build upon, the tigers found fewer areas for themselves to hunt. They thus turned to farms to get their food. Farmers' livestock were attacked by these tigers. People were then encouraged to hunt and kill these animals with the promise of rewards. Even after the threat of tigers on livestock was over, man continued to hunt tigers, this time for recreation. Poachers also hunt tigers for their body parts, knowing that the skin of tigers is much sought after. Bones and other organs are also used as ingredients in traditional Chinese medicine. Although killing tigers is illegal, it is still being carried out, and unless it is stopped, the remaining species of tigers will soon become extinct too.

Choose the correct answer from a, b, c, or d:

- How many species of tigers were there originally?
a) Three. b) Four. c) Five. d) Eight.
- There were fewer hunting grounds for the tigers because
a) the tiger population was becoming bigger

b) increase the population of tigers
c) increase the amount of Chinese medicine
d) increase the price of body parts
- Hunting tigers is considered a kind of
a) business b) mercy
c) recreation d) both a and b
- The other noun that means "livestock" is ".....".
a) poachers b) cattle c) pests d) tigers
- Tigers' bones can be used in
a) traditional medicine b) food
c) recreation d) feeding livestock
- According to the passage, tigers
a) don't fear hot climates b) are in danger of extinction
c) don't like water d) don't eat livestock

Passage No. 3

Football, or soccer, which is considered to be the most popular sport in the world, is a team sport played between two teams of eleven players using a spherical ball.

The object of the game, which is played on a wide rectangular field with a goal on each end of the field, is to score by putting the ball into the adversary's goal. A goalkeeper is allowed, except for other players, to use his/her hands in the game while keeping the goal. The winners are those who score the most goals. If the football match ends in a draw, the two teams may be redirected to play extra time and/or penalty shootouts (each team taking turns to have a set number of kicks at the goal).

The way football is played now was first codified in England. Nowadays, it is governed by FIFA, "Fédération Internationale de Football Association" (International Federation of Association Football). The game is played now all over the world, and competitions are organized nationally, continentally, and internationally. The most prestigious of football competitions is the World Cup, which is held every four years.

Playing soccer just for fun can be done in backyards, on streets, or on beaches. All you need is a ball. Soccer can also be a great sport for kids who may not have high levels of athletic ability but who would like to participate in team sports. Soccer is ideal for boys, girls, men, and women, who play the same game under the same rules and, where physically appropriate, may play alongside each other.

6. What is the aim of the text?
 - a) To persuade the reader to play football.
 - b) To entertain the reader with football.
 - c) To explain a football match.
 - d) To describe football.

7. What is the difference between the goalkeeper and the other players in the team?
- He/She is not allowed to use his/her foot.
 - He/She is the only one who can pass the ball inside the penalty area.
 - He/She is allowed to use his/her hands.
 - He/She is not allowed to shoot the free kicks.

Read the following passage, then answer the questions:

In the UK, the diseases connected to smoking are a big problem. Doctors think that the annual medical cost for lung cancer, heart disease, and other illnesses connected to smoking is between 12 and 35 million pounds.

And smoking costs society money in other ways. Between 27 and 61 billion pounds are spent each year on sick days when people don't go to work, on wages that you don't get when you don't go to work, and on work lost at the company when you are sick.

This money counts the wages from people who die of cancer at a young age and stop paying taxes. This does not count fires started by cigarettes, which kill fifteen hundred people yearly and injure another four thousand. Smoking costs every man, woman, and child in the UK from one hundred and ten to two hundred and fifty pounds each year in lost work and wages. When you add another fifty to one hundred and fifty pounds yearly in insurance cost, that comes to one hundred and sixty to four hundred and ten pounds. If everyone stopped smoking, a family of four could have up to one thousand six hundred and forty pounds a year more. Smoking will also cause other problems. People who don't smoke will live longer, and so they will take money from the government when they are old. But they will also work for more years and pay more taxes.

In the end, the value of a non-smoking nation is not in pounds. The good health of the people is the true value for us all.

► Read the following passage, then answer the questions:

You are a citizen of the country you were born in. Usually, citizens live in their country as loyal members of society. Many countries also have options, so people who are not natural-born citizens can become citizens of those countries. When they complete the requirements, they are called naturalized citizens. As a citizen of your country, you have some rights, duties, and responsibilities. The law of any country should guarantee the rights of all citizens, and the rights should be the same for all citizens. The rights of citizens are protected by the constitution.

A citizen has the right to speak freely and the right to religious freedom. A citizen who is accused of a crime has a right to a fair trial. In exchange for their rights, citizens have duties and responsibilities. They have a duty to serve in the army when asked. They should obey all laws. In wartime, they must serve in the Armed Forces when required to. They must pay taxes to support the services and programs of the government. Good citizens vote in elections to express their opinions on how the government should be run.

► Read the following passage, then answer the questions:

People behave in different ways, and many things affect how they act. Their upbringing, experiences, culture, and surroundings all play a part. For example, a person raised in a caring family may feel confident when facing problems. On the other hand, someone who has faced tough situations may be more careful in their actions.

Culture also influences behavior. In some cultures, showing respect and politeness is very important, while in others, being direct and honest is valued more. Because of these differences, people from different cultures might misunderstand each other. For instance, what seems **polite** in one culture could seem **rude** in another.

Emotions are another big factor in behavior. When people are happy, they are more likely to be kind and helpful. However, feelings like anger or fear can change how people act. Anger might make someone act without thinking, while fear might stop them from trying new things.

Social media has also changed how people behave. Many people now look for likes and comments to feel good about themselves. Sometimes, they may share things online that don't reflect who they really are. On social media, people might say things they wouldn't say in real life, which can lead to arguments or misunderstandings.

Choose the correct answer from a, b, c, or d:

► **Read the following passage, then answer the questions:**

You may have seen pictures of astronauts. They float around in space. They fly in a space shuttle. Have you ever wondered why they float? Your feet stay firmly on the ground. Why don't they? When you drop something, why does it fall? The answer to these questions is something called gravity. It affects everything we do. Gravity is **essential** for life on Earth. Many years ago, a man named Sir Isaac Newton wondered about gravity, too. He watched and tested the way things move and fall on Earth. He wrote his ideas down. Scientists today use a lot of his ideas. Those ideas are now considered laws of science. Gravity is a force that makes all objects attracted to each other. The bigger the object is, the more it attracts things. Since nothing on Earth is bigger than planet Earth itself, all the things and people on Earth are attracted to Earth. Everything is pulled towards the center of the planet. That is why things fall to the ground. It is also why people and things stay on the ground instead of floating around in space. Earth is even large enough to attract our moon. That's why we can see it in our sky!

Gravity keeps our muscles and bones up and working. Gravity allows Earth to retain its atmosphere. Gravity, being able to store its energy as "potential energy", allows us to harness it.

Choose the correct answer from a, b, c, or d:

14. Why do your feet stay on the ground instead of floating?

- a) Because they are heavy.
- b) Because there isn't enough air.
- c) Because of gravity.

3. Read the following passage, then answer the questions :

I've been writing music for video games for nearly 15 years now. People outside the video game industry are often surprised to learn that such a job actually exists. But with video games

becoming increasingly popular, having a successful career as a video game music composer is now a realistic ambition for many young people. Being a composer is not easy though **determination** is essential if you want to do well in this job.

I got into this career by accident. One day, my teacher offered me some work playing music on a recording she was making. I did the work and didn't think any more about it. A few months later, my sister was playing a video game at home when I suddenly recognised the music and saw my name on the screen. I knew then that this could be a career! From that point on, I tried to learn as much as possible about all kinds of music and I would recommend anyone considering becoming a composer to do the same. I also realised how **beneficial** it was to attend video game conferences to have plenty of self-confidence because representatives from all the major video game companies are there.

People think the job is just about having fun, but it's not always the case. You spend a lot of time working alone, so motivation is a key aspect of this career. If you're not the sort of person who can accept criticism, then perhaps this isn't the job for you.

- The main idea of the passage is ".....".
 - The history of music
 - How I became a music composer
 - How to play video games
 - When to play music
- The writer got into this career
 - by force
 - accidentally
 - on purpose
 - luckily
- "....." is the synonym of the underlined word "**determination**".
 - Prevention
 - Persistence
 - Hesitation
 - Happiness
- The antonym of the underlined word '**beneficial**' is ".....".
 - harmful
 - helpful
 - useful
 - careful
- The writer would recommend for anyone considering becoming a composer to
 - play video games
 - listen to music
 - look at the screen
 - learn about all kinds of music
- According to the text, having a successful career as a video game music composer is
 - a hard effort for young people
 - an interesting thing for old people
 - a realistic ambition for many young people
 - unnecessary work for young people
- If you're not the sort of person who can accept criticism,
 - then perhaps this isn't the job for you
 - I think I probably have the best job in the world
 - your first or second piece of music won't necessarily be successful
 - it can also be frustrating
- One of the following is **NOT** mentioned in the passage: ".....".
 - It's beneficial to attend video games conferences.
 - It's useful to create your own website.
 - It's vital to have plenty of self-confidence.
 - Motivation is a key aspect of this career.

On a cold day in winter, a woman was walking home when she noticed a snake lying on the other side of the road. It was hardly moving and was obviously dying of cold. The woman, being kind hearted, took off her scarf, wrapped the snake up in it and went home. There, she put the snake, wrapped in the scarf, next to the cooker where it would get warm and start showing signs of life.

Slowly the snake’s body became warm and it left the scarf and started exploring the kitchen, looking for something to eat. The woman found some food for it and the snake, which was very hungry, quickly finished all the food, returned to the scarf next to the cooker and went to sleep. The days went by and the snake fully recovered. The weather remained cold, so the woman hadn’t the heart to put the snake outside again. She got used to having the snake around and taking care of it. One day when the woman was busy cooking her lunch, a pain shot through her leg and she dropped the pan of oil she was holding. She looked down at her foot and saw two small holes. The snake had bitten her.

She turned to the snake and cried, “How could you bite me, when I’ve always been so good to you? Now I’m going to die.” The snake seemed to smile at her as it replied “you knew I was a snake when you brought me here, so why are you complaining now?”

Reading Comprehension

As the world population continues to grow and climate change makes it more difficult to produce food in the traditional way, scientists are developing new ways of growing plants efficiently. One of these ways is growing plants without soil. Although this may sound like a modern process, it is not new technology. Ancient Egyptians writings describe how plants were grown in water and early examples include the famous gardens of Babylon and floating gardens built by the Aztec in Mexico. In traditional farming, soil protects the roots of plants, but scientists have shown that plants don't need soil to grow as long as they can get nutrients from somewhere, they will grow successfully. To grow plants without soil, a special fertilizer is added to water, the plants take this in through their roots.

Recently, this technology has developed very quickly. It is common in northern Europe where it is used to grow food crops. Vegetables have been grown in submarines and astronauts have produced food in space using this technology. Many people think that growing plants in water could help to solve the world's food problems. As cities become larger, there is less land for agriculture. Countries with little land for growing crops could produce more of their food without soil. This way can also be used in poor soils such as deserts and in areas near the sea where salty water is damaging the soil. Perhaps soon there will be no areas in the world where food can be produced.

Reading Comprehension

Read the following passage, then answer the questions:

The application of spreading theories of economics has so far failed to lift developing countries out of the cycle of poverty that has effects on the majority of their inhabitants. Worldwide, there are still an estimated 1.3 billion people earning a dollar or less a day and living in extreme poverty. Decades of huge loans by banks from affluent nations-at interest rates that cripple developing economies do not appear to be providing a solution to poverty. Professor Muhammad Yunus' Grameen Bank, however, is taking a different approach to the problem.

In 1976, the Bangladeshi economics professor started a microcredit programme with a loan of just 62 cents (U.S) each to a group of 42 workers. Instead of loaning large amounts of money to well-off debtors, the bank he started made extremely small loans to poor Bangladeshis who were considered a bad risk by the traditional banking system.

He astounded his critics by proving that the poor were more likely to repay their debts than the wealthy. Virtually none of the thousands of women who have been financially assisted by the bank for over 20 years have defaulted on their payments. Yet all are expected

to pay interest and stick to the rules of contract. These borrowings have enabled Bangladeshi women to set up numerous small-scale projects which directly benefit their families and the communities where they live. The success of the experiment has brought about a revolution in the antipoverty programmes.
